Congressional District 1

Rep Doug LaMalfa

Knowing your data can help you identify how to best address childhood adversity in your community.

HOW ARE FAMILIES FARING?

In California, one in 6 children have experienced two or more adverse childhood Experiences.¹ Adversity endured by caregivers is also an important indicator of risk for children. About half of mothers who recently gave birth in California (48%) reported having experienced hardships as children.²

OPPORTUNITIES FOR SUPPORT

Supporting families and children by addressing protective factors can reduce exposure to adverse experiences and mitigate its long-term effects. Economic stability, access to health care, and engagement in school are important sources of protection.

The table below compares your legislative district with the California average on selected measures associated with childhood adversity that could be areas of intervention and policy change.

Measures	Congressional District 1	California
Deep Poverty : Percentage of children living below 50% of the federal poverty threshold	10%	9%
Unemployment : Percentage of children without secure parental employment	39%	33%
Uninsured : Percentage of children ages 0-17 without health insurance coverage	7%	5%
School Readiness : Percentage of children ages 3-5 not enrolled in preschool or kindergarten	38%	39%
Disconnected Youth : Percentage of teens ages 16- 19 not in school and not working	9%	8%
2+ ACEs : Percentage of children ages 0-17 who have experienced two or more ACEs	16%	16%

See definitions and additional measures on **kidsdata.org**: http://www.kidsdata.org/region/2013/summary Sources: National Survey of Children's Health, Maternal and Infant Health Survey, and American Community Survey

Congressional District 20

Rep Jimmy Panetta

Knowing your data can help you identify how to best address childhood adversity in your community.

HOW ARE FAMILIES FARING?

In California, one in 6 children have experienced two or more adverse childhood Experiences.¹ Adversity endured by caregivers is also an important indicator of risk for children. About half of mothers who recently gave birth in California (48%) reported having experienced hardships as children.²

OPPORTUNITIES FOR SUPPORT

Supporting families and children by addressing protective factors can reduce exposure to adverse experiences and mitigate its long-term effects. Economic stability, access to health care, and engagement in school are important sources of protection.

The table below compares your legislative district with the California average on selected measures associated with childhood adversity that could be areas of intervention and policy change.

Measures	Congressional District 20	California
Deep Poverty : Percentage of children living below 50% of the federal poverty threshold	7%	9%
Unemployment : Percentage of children without secure parental employment	37%	33%
Uninsured : Percentage of children ages 0-17 without health insurance coverage	6%	5%
School Readiness : Percentage of children ages 3-5 not enrolled in preschool or kindergarten	48%	39%
Disconnected Youth : Percentage of teens ages 16- 19 not in school and not working	7%	8%
2+ ACEs : Percentage of children ages 0-17 who have experienced two or more ACEs	16%	16%

See definitions and additional measures on **kidsdata.org**: http://www.kidsdata.org/region/2032/summary Sources: National Survey of Children's Health, Maternal and Infant Health Survey, and American Community Survey

Knowing your data can help you identify how to best address childhood adversity in your community.

HOW ARE FAMILIES FARING?

In California, one in 6 children have experienced two or more adverse childhood Experiences.¹ Adversity endured by caregivers is also an important indicator of risk for children. About half of mothers who recently gave birth in California (48%) reported having experienced hardships as children.²

OPPORTUNITIES FOR SUPPORT

Supporting families and children by addressing protective factors can reduce exposure to adverse experiences and mitigate its long-term effects. Economic stability, access to health care, and engagement in school are important sources of protection.

The table below compares your legislative district with the California average on selected measures associated with childhood adversity that could be areas of intervention and policy change.

Measures	Congressional District 38	California
Deep Poverty : Percentage of children living below 50% of the federal poverty threshold	5%	9%
Unemployment : Percentage of children without secure parental employment	26%	33%
Uninsured : Percentage of children ages 0-17 without health insurance coverage	6%	5%
School Readiness : Percentage of children ages 3-5 not enrolled in preschool or kindergarten	39%	39%
Disconnected Youth : Percentage of teens ages 16- 19 not in school and not working	8%	8%
2+ ACEs : Percentage of children ages 0-17 who have experienced two or more ACEs	16%	16%

See definitions and additional measures on **kidsdata.org**: http://www.kidsdata.org/region/2050/summary Sources: National Survey of Children's Health, Maternal and Infant Health Survey, and American Community Survey
